

Version 10, Updated 10/01/2024

# **Common Cements**Material Safety data sheet

According to Regulation (EC) No 1907/2006 (REACH)

Section 1: Identification of the substance/mixture and of the company/undertaking

#### 1.1 Product identifier

| Products EN 197-1 Common cements and mixtures containing them |   |  |  |  |
|---|---|--|--|--|
| Trade Names   |   |  |  |  |
| Bulk Cements  | Packed Cements                                |  |  |  |
| Heidelberg Materials Portland Cement                          | Heidelberg Materials Multicem                 |  |  |  |
| Heidelberg Materials Portland Limestone Cement                | Heidelberg Materials General Purpose Cement   |  |  |  |
| Heidelberg Materials White Portland Cement                    | <b>Hanson Low Carbon Cement</b>               |  |  |  |
| Heidelberg Materials White Portland Limestone                 | Hanson High Strength 52,5N                    |  |  |  |
| Cement  | Heidelberg Materials White Portland Limestone |  |  |  |
|   | Cement  |  |  |  |

The following are the substances in the cement that contribute to the classification of the mixture as regards acute toxicity, skin corrosion or serious eye damage, respiratory or skin sensitisation, specific target organ toxicity (STOT) or aspiration hazard.

| Substance                           | EINECS     | CAS        | Hazard                    |
|-------------------------------------|------------|------------|---------------------------|
| Portland cement clinker             | 266-043-4* | 65997-15-1 | Serious eye damage, Skin  |
|                                     |            |            | sensitisation and STOT SE |
| Flue dust from production of cement | 270-659-9  | 68475-76-3 | Serious eye damage, Skin  |
| clinker**                           |            |            | sensitisation and STOT SE |

<sup>\*</sup> Entry is called Cement, Portland, Chemicals.

#### 1.2 Relevant identified uses of the substance or mixture and uses advised against

Cements are used in industrial installations to manufacture/formulate hydraulic binders for building and construction work, such as ready-mixed concrete, mortars, renders, grouts, plasters as well as precast concrete.

Common cements and cement containing mixtures (hydraulic binders) are used industrially, by professionals as well as by consumers in building and construction work, indoor and outdoor.

<sup>\*\*</sup> May exist in some products. For the purposes of this SDS information assume this substance exists.

The identified uses of cements and cement containing mixtures cover the dry products and the products in a wet suspension (paste).

Any uses not mentioned above, are advised against.

# 1.3 Details of the supplier of the safety data sheet

Heidelberg Materials Second floor Arena Court Crown Lane Maidenhead Berkshire SL6 8QZ

# 1.4 Heidelberg Materials Customer Services

Tel: 0330 123 4525

E-mail: <a href="mailto:cement.customer.services@uk.heidelbergmaterials.com">cement.customer.services@uk.heidelbergmaterials.com</a>

# 1.4 Emergency telephone number

Emergency telephone number: 0330 123 4520

Hours of operation: 06.30 – 18.00 (Monday-Friday) 06.30 – 12.00 (Saturday)

Service is provided in English

Emergency telephone number is not available outside office hours.

#### **SECTION 2: Hazards identification**

#### 2.1 Classification of the substance or mixture

# 2.1.1 According to Regulation (EC) No 1272/2008 (CLP)

| Hazard class  | Hazard category | Hazard statements                      |
|---|-----------------|--|
| Skin irritation   | 2               | H315: Causes skin irritation           |
| Serious eye damage/eye<br>irritation  | 1               | H318: Causes serious eye damage        |
| Specific target organ toxicity single exposure respiratory tract irritation | 3               | H335: May cause respiratory irritation |

For further information please contact

Customer services: Tel: 0330 123 4525

#### 2.2 Label elements

# According to Regulation (EC) No 1272/2008 (CLP)

# **Hazard pictograms**

## Signal word

Danger

#### **Hazard statements**

H318 Causes serious eye damageH315 Causes skin irritation

H335 May cause respiratory irritation

# **Precautionary statements**

P102 Keep out of reach of children.

P280 Wear protective gloves/protective clothing/

eye protection/face protection.

P305+P351+P338+P310 IF IN EYES: Rinse cautiously with water for several

minutes. Remove contact lenses, if present and easy to

do. Continue rinsing. Immediately call a POISON

CENTRE or doctor/physician.

P302+P352+P333+P313 IF ON SKIN: Wash with plenty of soap and water. If skin

irritation or rash occurs: Get medical advice/attention.

P261+P304+P340+P312 Avoid breathing dust. IF INHALED: Remove victim to

fresh air and keep at rest in a position comfortable for breathing. Call a POISON CENTRE or doctor/physician if

you feel unwell.

For further information please contact

Customer services: Tel: 0330 123 4525

P501

Dispose of product/packaging by hardening with the application of water and dispose of as concrete waste.

# Supplemental information

Skin contact with wet cement, fresh concrete or mortar may cause irritation, dermatitis or burns. May cause damage to products made of aluminium or other non-noble metals.

#### 2.3 Other hazards

Cement does not meet the criteria for PBT or vPvB in accordance with Annex XIII of REACH (Regulation (EC) No 1907/2006).

When cement reacts with water, for instance when making concrete or mortar, or when the cement becomes damp, a strong alkaline solution is produced. Due to the high alkalinity, wet cement may provoke skin and eye irritation.

The product contains chromate reducing agent. As a result, the content of soluble chromium (VI) is less than 2 ppm. If the storage conditions are not appropriate or the storage period is exceeded, the effectiveness of the reducing agent can diminish, and the cement can become skin sensitizing.

#### **SECTION 3: Composition/information on ingredients**

#### 3.1 Substances

Not applicable

## 3.2 Mixtures

Common cement types according to the EN 197-1 standard:

CEM I 52,5N CEM I 52,5R CEM II/A-LL 32,5R CEM II/A-LL 42,5N CEM II/A-LL 52,5N

CEM III/A 42,5N LH

which contain less than 1% crystalline silica and:

- (a) Portland cement clinker is, according to Art. 2.7(b) and Annex V.10 of EC Regulation 1907/2006 (REACH), exempt from the registration requirement.
- (b) "Flue Dust" is a substance (UVCB), arising during production of cement clinker; other conventional names are cement kiln dust, bypass meal, filter dust, ESP dust and clinker dust.

For further information please contact

Customer services: Tel: 0330 123 4525

#### **SECTION 4: First aid measures**

#### 4.1 Description of first aid measures

#### **General notes**

No personal protective equipment is needed for first aid responders. First aid workers should avoid contact with wet cement or wet cement containing mixtures.

# **Following inhalation**

Move the person to fresh air. Dust in throat and nasal passages should clear spontaneously. Contact a physician if irritation persists or later develops or if discomfort, coughing or other symptoms persist.

#### Following skin contact

For dry cement, remove and rinse abundantly with water. For wet cement, wash skin with plenty of water. Remove contaminated clothing, footwear, watches, etc. and clean thoroughly before re-using them. Seek medical treatment in all cases of irritation or burns.

#### Following eye contact

Do not rub eyes in order to avoid possible cornea damage as a result of mechanical stress. Remove contact lenses if any. Incline head to injured eye, open the eyelid(s) widely and flush eye(s) immediately by thoroughly rinsing with plenty of clean water for at least 20 minutes to remove all particles. Avoid flushing particles into uninjured eye. If possible, use isotonic water (0.9% NaCl). Contact a specialist of occupational medicine or an eye specialist.

#### **Following ingestion**

Do not induce vomiting. If the person is conscious, wash out mouth with water and give plenty of water to drink. Get immediate medical attention or contact the anti-poison centre.

# 4.2 Most important symptoms and effects, both acute and delayed

# **Eyes**

Eye contact with cement (dry or wet) may cause serious and potentially irreversible injuries.

For further information please contact

Customer services:

Tel: 0330 123 4525

Heidelberg Materials

#### Skin

Cement may have an irritating effect on moist skin (due to sweat or humidity) after prolonged contact or may cause contact dermatitis after repeated contact. Prolonged skin contact with wet cement or wet concrete may cause serious burns because they develop without pain being felt (for example when kneeling in wet concrete even when wearing trousers).

For more details see Reference (1).

#### **Inhalation**

Repeated inhalation of dust of common cements over a long period of time increases the risk of developing lung diseases.

#### **Environment**

Under normal use, common cement is not hazardous to the environment.

#### 4.3 Indication of any immediate medical attention and special treatment needed

When contacting a physician, take this MSDS with you.

#### **SECTION 5: Fire-fighting measures**

# 5.1 Extinguishing media

Common cements are not flammable.

#### 5.2 Special hazards arising from the substance or mixture

Cements are non-combustible and non-explosive and will not facilitate or sustain the combustion of other materials.

#### **5.3 Advice for fire-fighters**

Cement poses no fire-related hazards. No need for special protective equipment for fire fighters.

For further information please contact

Customer services:

Tel: 0330 123 4525

#### **SECTION 6: Accidental release measures**

#### 6.1 Personal precautions, protective equipment, and emergency procedures

#### 6.1.1 For non-emergency personnel

Wear protective equipment as described under Section 8 and follow the advice for safe handling and use given under Section 7.

#### 6.1.2 For emergency responders

Emergency procedures are not required. However, respiratory protection is needed in situations with high dust levels.

#### 6.2 Environmental precautions

Do not wash cement down sewage and drainage systems or into bodies of water (e.g. streams).

#### 6.3Methods and material for containment and cleaning up

Collect the spillage in a dry state if possible.

# **Dry cement**

Use clean up methods such as vacuum clean-up or vacuum extraction (Industrial portable units, equipped with high efficiency air filters (EPA and HEPA filters, EN 1822) or equivalent technique) which do not cause airborne dispersion. Never use compressed air. Alternatively, wipe-up the dust by mopping, wet brushing or by using water sprays or hoses (fine mist to avoid that the dust becomes airborne) and remove slurry. If not possible, remove by slurrying with water (see wet cement). When wet cleaning or vacuum cleaning is not possible and only dry cleaning with brushes can be done, ensure that the workers wear the appropriate personal protective equipment and prevent dust from spreading. Avoid inhalation of cement and contact with skin. Place spilled materials into a container. Solidify before disposal as described under Section 13.

For further information please contact

Customer services: Tel: 0330 123 4525

#### Wet cement

Clean up wet cement and place in a container. Allow material to dry and solidify before disposal as described under Section 13.

#### 6.4 Reference to other sections

See Sections 8 and 13 for more details.

# **SECTION 7: Handling and storage**

# 7.1 Precautions for safe handling

#### 7.1.1 Protective measures

Follow the recommendations as given under Section 8. To clean up dry cement, see Subsection 6.3.

#### Measures to prevent fire

Not applicable

# Measures to prevent aerosol and dust generation

Do not sweep. Use dry clean up methods such as vacuum clean-up or vacuum extraction, which do not cause airborne dispersion.

For more information, refer to the practice guidelines adopted under the Social Dialogue Agreement on Workers' Health Protection through the Good Handling and Use of Crystalline Silica and Products Containing it, by Employee and Employer European sectoral associations, among which CEMBUREAU. These safe handling practices can be found via the following link:

http://www.nepsi.eu/agreement-good-practice-guide/good-practice-guide.aspx.

#### Measures to protect the environment

No special measures required.

For further information please contact

Customer services:

Tel: 0330 123 4525

# 7.1.2 Information on general occupational hygiene

Do not handle or store near food and beverages or smoking materials. In dusty environment, wear dust mask and protective goggles. Use protective gloves to avoid skin contact.

## 7.2 Conditions for safe storage, including any incompatibilities

Bulk cement should be stored in silos that are waterproof, dry (i.e. with internal condensation minimised), clean and protected from contamination. Engulfment hazard: To prevent engulfment or suffocation, do not enter a confined space, such as a silo, bin, bulk truck, or other storage container or vessel that stores or contains cement without taking the proper safety measures. Cement can build-up or adhere to the walls of a confined space. The cement can release, collapse or fall unexpectedly. Packed products should be stored in unopened bags clear of the ground in cool, dry conditions and protected from excessive draught in order to avoid degradation of quality. Bags should be stacked in a stable manner. Do not use aluminium containers for the storage or transport of wet cement containing mixtures due to incompatibility of the materials.

#### 7.3 Specific end use(s)

No additional information for the specific end uses (see section 1.2).

#### Control of soluble Cr (VI)

For cements treated with a Cr (VI) reducing agent according to the regulations given in Section 15, the effectiveness of the reducing agent diminishes with time. Therefore, cement bags and/or delivery documents will contain information on the packaging date, the storage conditions, and the storage period appropriate to maintaining the activity of the reducing agent and to keeping the content of soluble chromium VI below 0.0002 % of the total dry weight of the cement ready for use, according to EN 196-10. They will also indicate the appropriate storage conditions for maintaining the effectiveness of the reducing agent.

For further information please contact

Customer services: Tel: 0330 123 4525

# **SECTION 8:** Exposure controls/personal protection

# 8.1 Control parameters

# 8.1.1 Exposure limit values (Workplace Exposure Limits WEL)

| Substance               | CAS        | Long Term<br>Exposure Limit (8hr<br>TWA Reference<br>Method) | Legal Reference            |
|-------------------------|------------|--|----------------------------|
| Portland Cement Clinker |            | -  | _                          |
| Inhalable dust          | 65997-15-1 | 10 mg/m <sup>3</sup>   | COSHH 2002 & HSE EH40/2005 |
| Respirable dust         |            | 4 mg/m <sup>3</sup>  |                            |

Recommendations given here are based on a DNEL level of 3mg/m<sup>3</sup>

# 8.2.1 Appropriate engineering controls

Measures to reduce generation of dust and to avoid dust propagating in the environment such as dedusting, exhaust ventilation and dry clean-up methods which do not cause airborne dispersion.

For further information please contact

Customer services: Tel: 0330 123 4525

# 8.2.2 Individual protection measures such as personal protection equipment

#### General

During work avoid kneeling in fresh mortar or concrete wherever possible. If kneeling is absolutely necessary then appropriate waterproof personal protective equipment must be worn. Do not eat, drink or smoke when working with cement to avoid contact with skin or mouth. Before starting to work with cement, apply a barrier cream and reapply it at regular intervals. Immediately after working with cement or cement- containing materials, workers should wash or shower or use skin moisturisers.

Remove contaminated clothing, footwear, watches, etc. and clean thoroughly before re-using them.

#### Eye/face protection

Wear approved glasses or safety goggles according to EN 166 when handling dry or wet cement to prevent contact with eyes.

#### Skin protection

Use watertight, wear and alkali resistant gloves (e.g. Nitrile soaked cotton gloves with UKCA Marking) internally lined with cotton, boots, closed long-sleeved protective clothing as well as skin care products (including barrier creams) to protect the skin from prolonged contact with wet cement. Particular care should be taken to ensure that wet cement does not enter the boots. Regarding gloves, investigations have proven that nitrile impregnated cotton gloves (layer thickness of c. 0.15mm) provide sufficient protection over a period of 480 minutes, subject to normal wear and tear which can be task dependent. Always change damaged or soaked gloves immediately. Always have spare gloves in ready supply. In some circumstances, such as when laying concrete or screed, waterproof trousers or kneepads are necessary.

For further information please contact

Customer services: Tel: 0330 123 4525

# **Respiratory protection**

When a person is potentially exposed to dust levels above exposure limits, use appropriate respiratory protection. The type of respiratory protection should be adapted to the dust level and conform to the relevant EN standard, (EN 149) or national standard.

#### Thermal hazards

Not applicable

For further information please contact

Customer services: Tel: 0330 123 4525

An overview of the APFs of different RPE (according to EN 529) can be found in the glossary of MEASE (16). Any RPE as defined above shall only be worn if the following principles are implemented in parallel: The duration of work (compare with "duration of exposure" above) should reflect the additional physiological stress for the worker due to the breathing resistance and mass of the RPE itself, due to the increased thermal stress by enclosing the head. In addition, it shall be considered that the worker's capability of using tools and of communicating are reduced during the wearing of RPE. For reasons as given above, the worker should therefore be (i) healthy (especially in view of medical problems that may affect the use of RPE), (ii) have suitable facial characteristics reducing leakages between face and mask (in view of scars and facial hair). The recommended devices above which rely on a tight face seal will not provide the required protection unless they fit the contours of the face properly and securely. The employer and self-employed persons have legal responsibilities for the maintenance and issue of respiratory protective devices and the management of their correct use in the workplace. Therefore, they should define and document a suitable policy for a respiratory protective device programme including training of the workers.

#### 8.2.3 Environmental exposure controls

#### Air

Environmental exposure control for the emission of cement particles into air has to be in accordance with the available technology and regulations for the emission of general dust particles. Storing, loading or unloading cement in bulk prior to further transportation in bulk, blending cement in bulk or using cement in bulk other than at a construction site, including the bagging of cement and cement mixtures, the batching of ready-mixed concrete and the manufacture of concrete blocks and other cement products, requires a permit under the Environmental Permitting (England and Wales) Regulations 2016.

#### Water

Do not wash cement into sewage systems or into bodies of water, to avoid high pH. Above pH 9 negative eco-toxicological impacts are possible.

#### Soil and terrestrial environment

No special emission control measures are necessary for the exposure to the terrestrial environment.

For further information, refer to Section 6 on 'Accidental release measures.

For further information please contact

Customer services:

Tel: 0330 123 4525

#### **SECTION 9: Physical and chemical properties**

#### 9.1 Information on basic physical and chemical properties

This information applies to the whole mixture.

- (a) Physical state: Dry cement is a finely ground solid inorganic material
- (b) Colour: Grey or white powder (dry cement)
- (c) Odour: Odourless
- (d) Melting point/freezing point: Melting point ≥1,250°C
- (e) Boiling point or initial boiling point and boiling range: Not applicable as under normal atmospheric conditions, melting point ≥1,250°C
- (f) Flammability (solid, gas): Not applicable as is a solid which is noncombustible and does not cause or contribute to fire through friction
- (g) Upper/lower explosive limits: Not applicable as is not a flammable gas
- (h) Flash point: Not applicable as is not a liquid
- (i) Auto-ignition temperature: Not applicable (no pyrophoricity no organo-metallic, organo-metalloid or organo-phosphine bindings or of their derivatives, and no other pyrophoric constituent in the composition)
- (j) Decomposition temperature: Not applicable as no organic peroxide present
- (k) pH: (T = 20°C in water, water-solid ratio 1:2): 11-13.5
- (I) Kinematic viscosity: Not applicable as not a liquid
- (m) Solubility in water (T =  $20^{\circ}$ C): slight (0.1-1.5 g/l)
- (n) Partition coefficient: n-octanol/water: Not applicable as is inorganic mixture
- (o) Vapour pressure: Not applicable as melting point ≥1,250°C
- (p) Density and/or relative density: 2.75-3.20; Apparent density: 0.9-1.5 g/cm<sup>3</sup>
- (q) Relative vapour density: Not applicable as melting point ≥1,250 °C
- (r) Typical particle size: 5-30 mm.

For further information please contact

Customer services: Tel: 0330 123 4525

#### 9.2 Other information

#### 9.2.1 Information with regard to physical hazard classes

Not applicable.

#### 9.2.2 Other safety characteristics

Not applicable.

#### **SECTION 10: Stability and reactivity**

#### 10.1 Reactivity

When mixed with water, cements will harden into a stable mass that is not reactive in normal environments.

# 10.2 Chemical stability

Dry cements are stable as long as they are properly stored (see Section 7) and compatible with most other building materials. They should be kept dry.

Contact with incompatible materials should be avoided. Wet cement is alkaline and incompatible with acids, with ammonium salts, with aluminium or other non-noble metals. Cement dissolves in hydrofluoric acid to produce corrosive silicon tetrafluoride gas. Cement reacts with water to form silicates and calcium hydroxide. Silicates in cement react with powerful oxidizers such as fluorine, boron trifluoride, chlorine trifluoride, manganese trifluoride, and oxygen difluoride.

#### 10.3 Possibility of hazardous reactions

Cements do not cause hazardous reactions.

#### 10.4 Conditions to avoid

Humid conditions during storage may cause lump formation and loss of product quality.

For further information please contact

Customer services:

Tel: 0330 123 4525

# 10.5 Incompatible materials

Acids, ammonium salts, aluminium or other non-noble metals. Uncontrolled use of aluminium powder in wet cement should be avoided as hydrogen is produced.

# 10.6 Hazardous decomposition products

Cements will not decompose into any hazardous products.

# **SECTION 11: Toxicological information**

# 11.1 Information on hazard classes as defined in Regulation (EC) No 1272/2008

| Hazard class               | Cat | Effect   | Reference  |

Apart from skin sensitisation, Portland cement clinker and common cements have the same toxicological and eco-toxicological properties.

#### Medical conditions aggravated by exposure

Inhaling cement dust may aggravate existing respiratory system disease(s) and/or medical conditions such as emphysema or asthma and/or existing skin and/or eye conditions.

#### 11.2 Information on other hazards

#### 11.2.1 Endocrine disrupting properties

Not applicable.

#### 11.2.2 Other information

Not applicable.

#### **SECTION 12: Ecological information**

#### 12.1 Toxicity

The product is not hazardous to the environment. Eco-toxicological tests with Portland cement on Daphnia magna [Reference (5)] and Selenastrum coli [Reference (6)] have shown little toxicological impact. Therefore, LC50 and EC50 values could not be determined [Reference (7)]. There is no indication of sediment phase toxicity [Reference (8)]. The addition of large amounts of cement to water may however cause a rise in pH and may, therefore, be toxic to aquatic life under certain circumstances.

#### 12.2 Persistence and degradability

Not relevant. After hardening, cement presents no toxicity risks.

#### 12.3 Bioaccumulative potential

Not relevant. After hardening, cement presents no toxicity risks.

For further information please contact

Customer services:

Tel: 0330 123 4525

# 12.4 Mobility in soil

Not relevant. After hardening, cement presents no toxicity risks.

# 12.5 Results of PBT and vPvB assessment

Not relevant. After hardening, cement presents no toxicity risks.

# 12.6 Endocrine disrupting properties

Not relevant.

#### 12.7 Other adverse effects

Not relevant.

# **SECTION 13: Disposal considerations**

#### 13.1 Waste treatment methods

Do not dispose of into sewage systems or surface waters.

#### Product - cement that has exceeded its shelf life

EWC entry: 10 13 99 (Wastes not otherwise specified)

(and when demonstrated that it contains more than 0.0002% soluble Cr (VI)): shall not be used/sold other than for use in controlled closed and totally automated processes or should be recycled or disposed of according to local legislation or treated again with a reducing agent.

#### Product - unused residue or dry spillage

EWC entry: 10 13 06 (other particulates and dust)

Pick up dry unused residue or dry spillage as is. Mark the containers. Possibly reuse depending upon shelf life considerations and the requirement to avoid dust exposure. In case of disposal, harden with water and dispose according to "Product – after addition of water, hardened"

For further information please contact

Customer services: Tel: 0330 123 4525

**Heidelberg Materials** 

**Product – slurries** 

Allow to harden, avoid entry in sewage and drainage systems or into bodies of water (e.g. streams) and dispose of as explained below under "Product - after addition of water, hardened".

Product - after addition of water, hardened

EWC entries: 10 13 14 (waste from manufacturing of cement – waste concrete or concrete sludge) or 17 01 01 (construction and demolition wastes - concrete).

Dispose of according to the local legislation. Avoid entry into the sewage water system. Dispose of the hardened product as concrete waste. Due to the inertisation, concrete waste is not a dangerous waste.

**Packaging** 

EWC entries: 15 01 01 (waste paper and cardboard packaging).15 01 02 (Plastic packaging).

Completely empty the packaging and process it according to local legislation.

**SECTION 14: Transport information** 

Cement is not covered by the international regulation on the transport of dangerous goods (IMDG, IATA, ADR/RID), therefore no classification is required.

No special precautions are needed apart from those mentioned under Section 8.

14.1 UN number or ID number

Not relevant

14.2 UN proper shipping name

Not relevant

14.3 Transport hazard class(es)

Not relevant

#### 14.5 Environmental hazards

Not relevant

# 14.6 Special precautions for user

Not relevant

#### 14.7 Maritime transport in bulk according to IMO instruments

Not relevant

# **SECTION 15: Regulatory information**

# 15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

## **EU regulatory information**

Cement is a mixture according to REACH and is not subject to registration. Cement clinker is exempt from registration (Art 2.7 (b) and Annex V.10 of REACH).

The marketing and use of cement is subject to a restriction on the content of soluble Cr (VI) (REACH Annex XVII point 47 Chromium VI compounds)

#### **National regulatory information**

Health & Safety at Work, etc. Act 1974

Control of Substances Hazardous to Health Regulations (COSHH) 2002 Control of Substances

Hazardous to Health (Amendment) Regulations 2004

**Environmental Protection Act 1990**

**Heidelberg Materials** 

HSE Guidance Note EH40 (Workplace Exposure Limits)

Portland Cement Dust – Hazard assessment document, HSE Document EH75/7

The Environmental Permitting (England and Wales) Regulations 2016

#### 15.1 Chemical Safety Assessment

No chemical safety assessment has been carried out for this mixture by the supplier.

#### **SECTION 16: Other information**

#### 16.1 Indication of changes

This MSDS (Version 10 January 2024) replaces Version 9 'Material Safety Data Sheet – Common Cements' which was published in April 2022. The company name (Heidelberg Materials) and address (section 1.3) has been updated.

#### 16.2 Identified uses and use descriptors and categories

The table below gives an overview of all relevant identified uses of cement or cement containing hydraulic binders. All the uses have been grouped in these identified uses because of the specific conditions of exposure for human health and environment. For each specific use, a set of risk management measures or localised controls has been derived (see section 8) which need to be put in place by the user of cement or cement containing hydraulic binders to bring the exposure to an acceptable level.

# 16.5 Current hazard statements and precautionary statements

Hazard statements and precautionary statements are already listed under Section 2 'Hazards identification', 2.1 'Classification of the substance or mixture' and 2.2 Label Elements'.

#### 16.6 Training advice

In addition to health, safety and environmental training programs for their workers, companies must ensure that workers read, understand and apply the requirements of this SDS.

#### 16.7 Further information

The data and test methods used for the purpose of classification of common cements, are given or referred to in section 11.1.

# 16.8 Classification and procedure used to derive the classification for mixtures according to Regulation (EC) 1272/2008 [CLP]

| Classification according to Regulation (EC) No. 1272/2008 | Classification procedure |
|---|--------------------------|
| Skin Irrit. 2, H315                                       | on basis of test data    |
| Eye dam. 1, H318  | on basis of test data    |
| STOT SE. 3, H335  | Human experience         |
