

Horcott Quarry Site Biodiversity Action Plan

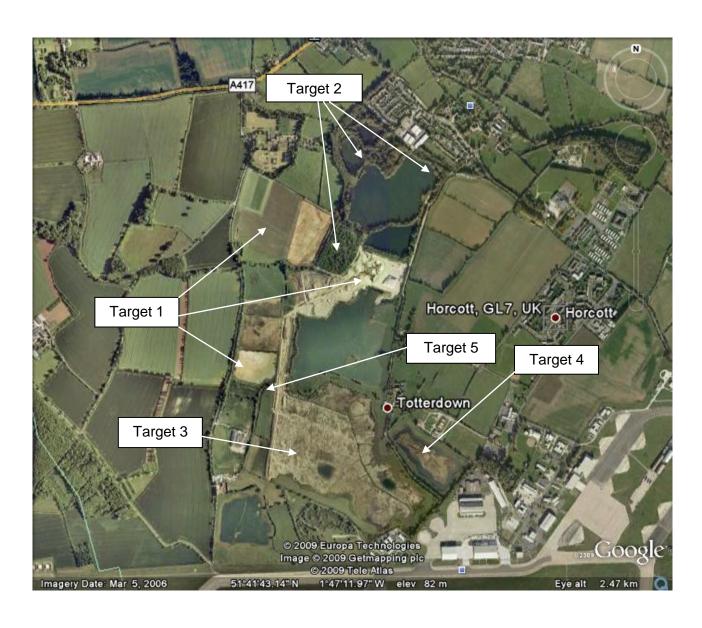

Prepared: 2009 Updated: 2013

Site Information- Horcott Quarry

Site Name and	Haraatt Ouarry Fairfard Clas			
	Horcott Quarry, Fairford, Glos.			
Location (incl. Grid	Grid Ref. SU 151 998 (entrance)			
Ref.)				
Hanson Company	Hanson Aggregates			
BAP(s) that will be	Cotswold Water Park BAP			
targeted	Gloucestershire BAP			
	SW Region BAP			
	UK BAP			
Habitat(s) to be	Fen, marsh and reedswamp			
developed	Standing open water			
•	Species rich wet grassland			
	Wet woodland			
	Ponds			
BAP species to be	Dragonflies (esp scarce emerald damselfly)			
encouraged	Black poplar			
cheodraged	Chara spp. (stoneworts)			
Designated Natural	Thames and Avon Vales			
Area	THAINES AND AVOIT VAIES			
	Approx 75ho and and evalual arraymy we shall a superiod at the same			
Background and	Approx 75ha sand and gravel quarry mainly excavated since			
site description	late 1980s but with parts of the landholding first dug in			
	1950s. Majority of the site comprised 1 st terrace gravel			
	associated with the Totterdown Brook and adjoining ditches,			
	with some areas of 2 nd terrace. Final reserves excavated			
	from plant site Dec 2012 and restoration earthworks			
	completed by end 2013. Older Northern lakes leased to			
	fishing clubs and local Scout group, with permissive footpath			
	agreement with Fairford Town Council.			
National	None			
Designations (SSSI,				
SAC, SPA etc)				
within 500m				
Resource	Quarry restoration budget is sufficient to cover most aspects			
Requirements-	of the BAP, though Forestry Commission EWGS grants have			
comment on cost if	offset some restoration planting costs, and management of			
appropriate	existing woodland areas is included in FC Woodland			
app. op. iato	Improvement Grant scheme.			
Contribution to	Creation of further lakes together with lake margin			
biodiversity	reedbeds and grassland through implementation of the			
biodiversity	approved restoration and aftercare schemes			
	Creation of wet woodland and mixed broadleaved			
	woodland on silt lagoons and soil store footprints			
	Improving habitat quality through management of existing			
	plantations and lake margin wet woodland			
	Submission of variations to approved restoration			
	schemes to increase extent of habitat			
Partners and Local	Cotswold Water Park Society			
initiatives	Fairford Town Council			
	Fairford Scout Group			
Other documents	Approved ROMP and Western Extension restoration plans			
supporting the site	H28m/132 and H28m/101a			
BAP	5-year Outline Aftercare schemes and annual			
	reports/proposals			
	all a seek all a arma			

Site Layout

Action Plan

Item	Objective	Biodiversity	Targets	Tasks	Assessing	Responsible	Timescale
No.		Feature	1,501,15	4.5	Indicator	Person	(Completion)
1	Increase	Wet woodland.	Vary approved ROMP	1. Design and draw up	Schemes	Landscape	ROMP and
	extent of	Black poplar.	restoration scheme to	revised ROMP restoration	approved and	Manager,	Jenks-Keyser
	target	Vegetated shorelines.	show increased wet	scheme, discuss with	earthworks	Estates	schemes
	habitats by		woodland on silt lagoons.	CWPS, MoD and GCC,	implemented.	Surveyor	amended and
	variation of		Vary lanks/Kayaar	then submit.			approved 2011, and further
	approved restoration		Vary Jenks/Keyser restoration scheme to	2 Design and draw up			and further amendment of
	schemes		show larger pond and	2. Design and draw up revised J/K scheme,			ROMP scheme
	Scrienies		increased wet woodland,	discuss with landlord and			to show
			as bird strike mitigation	GCC, then submit.			separate plant
			and to optimise use of soil	Goo, then submit.			site lake
			resources.	3. Implement approved	Area of wet		approved 2012
			100001000.	schemes	woodland planted		app10104 2012
				361.611.63	Woodiana piantoa		Implementation
					No. of Black		ongoing in
					poplar included in		accordance
					woodland areas.		with aftercare
							programme
2	To improve	Wet woodland and	Improve the structure and	Selective thinning of silt	Area of woodland	Landscape	Plantation to be
	habitat quality	associated flora and	diversity of young and	lagoon plantation to favour	thinned.	Manager	thinned by end
	of existing	fauna	middle-aged plantations	long-lived native species.			Q1 2015
	woodland	including bats	and lake shore woodland				
	resource		fringes.	2. Thin and/or coppice	Presence of dead	Boy Scouts?	Significant
			Introduce dead wood.	sections of shoreline	wood habitat		coppicing and
			Promote understorey and	woodland around old	piles, understorey		thinning
			ground flora species.	northern lakes.	and ground flora.		completed
				2 Consta habitat vilas 30	Decrees of his	OM/DO for	around
				3. Create habitat piles with	Presence of bat	CWPS for	northern fishing
				surplus timber and lop/top.	species using	bat boxes.	lakes 2012/13
				4 Frost small no of hat	boxes/shorelines		and 2013/14
				4. Erect small no. of bat			

				boxes and monitor.			
3	Increase extent of vegetated shorelines	Standing open water; vegetated shorelines; marginal linear reedswamp esp. for invertebrates and	Establish 2,000m (approx.) of new linear vegetated shoreline around Airbase Lake.	Implement final shoreline restoration of Airbase Lake and allow to flood. Fence off final lake	Revised landform implemented. Length of lake	Operations Manager.	Earthworks all completed by end 2013 Dense aquatic reed and scrub
		possibly water vole.		shoreline from grazing livestock to allow reed and scrub vegetation to develop.	margins fenced off, with marginal aquatics developing.		vegetation established by year 4 of Aftercare period
4	Existing reedbed	Reedbed and associated bird populations	Manage existing Phase 11 Totterdown Lane reedbed (Lake 128) to maintain favourable status for breeding birds.	Monitor and record breeding and wintering birds.	Annual bird monitoring records to be made available.	CWPS (WeBS local organiser)	Ongoing during Hanson ownership
			ū	2. Implement any necessary management eg. willow pulling and water level control.	Phragmites- dominated vegetation present with <10% willow growth		Significant hand-pulling of willows carried out 2009-10
5	Create new ponds	Ponds and associated invertebrates.	Create complex of ponds (say 5) within site.	Include pond complex within revised restoration design (as per Pond Conservation guidelines).	Area of new ponds constructed and monitored for dragonflies	Landscape Manager CWPS	Shown on ROMP plan
				Implement pond construction during restoration earthworks.			constructed during 2013 earthworks
				Maintain during aftercare period.			Maintenance ongoing
